Random Slicing

CDS 230

Fall 2018

This lecture focuses on the access of data in arrays at random locations.

1 The Plan

We will review the following topics:

- How to access data at specified locations.

- How to modify data at specified locations.

- How to obtain specified locations via a threshold operation.

2 Expected Outcomes

By the end of the lecture, you should be able to both retrieve and change data at specified locations in an array.
